NUTRITIONAL TEST - BM

Bowel Movements: Many people believe that the definition of a normal bowel movement is having 1 movement each day, but that is not true for everyone. There is no rule for frequency of bowel movements, but the general range is from **3 times a day** to 3 times a week. Less than 3 movements a week may indicate constipation, and more than 3 watery stools a day could indicate diarrhea. A bowel movement should be soft and easy to pass, though some people may have harder or softer stools than others. **Stool should be brown or golden brown, be formed, have a texture similar to peanut butter, and have a size and shape similar to a sausage.**

Number of Bowel
Movements a day: ____
Type: _____

If your BM is absent, loose, watery or abnormal score yourself a 1. Normal but not every day your score is a 2. Normal bowel 1 to 3 times a day give yourself a 3.
